

Patterns

1. a. How many tiles does it take to make the n-th pattern? Explain.

$3n + 4$
3 groups of n and 4 on the corners

b. What is the biggest pattern you can make if you have T tiles?

$3n + 4 = T$
 $3n = T - 4$

$n = \frac{T - 4}{3}$

If you have a remainder when dividing, then don't use it: you don't have enough for the next one.

2. How many toothpicks does it take to make the n-th pattern? Explain.

b. What is the first pattern that uses at least T toothpicks?

Problems to make bar diagrams for

a Sarah sold 18 brownies at the bake sale. She had 3 brownies left to take home at the end. How many brownies did she take to the bake sale?	b Mark has \$23. He has \$14 less than Alice. How much does Alice have?
c A pack of juice boxes has 8 boxes in it. How many juice boxes are in 6 packs?	d 6 friends share 42 candy bars. How many candy bars does each friend get?
e A snail crawls 4 feet in an hour. How long does it take for the snail to go 20 feet?	

Shapes: Make a big Venn diagram for all of the special quadrilaterals

Show different ways to do $47 + 25$ and $64 - 18$

Explain the commutative and distributive laws ←

Solve $1729 \div 7$ using scaffolding division and a tape diagram.

$$18 + 3 = ?$$

$$23 + 14 = ?$$

$$6 \times 8 = ?$$

$$42 \div 6 = ?$$

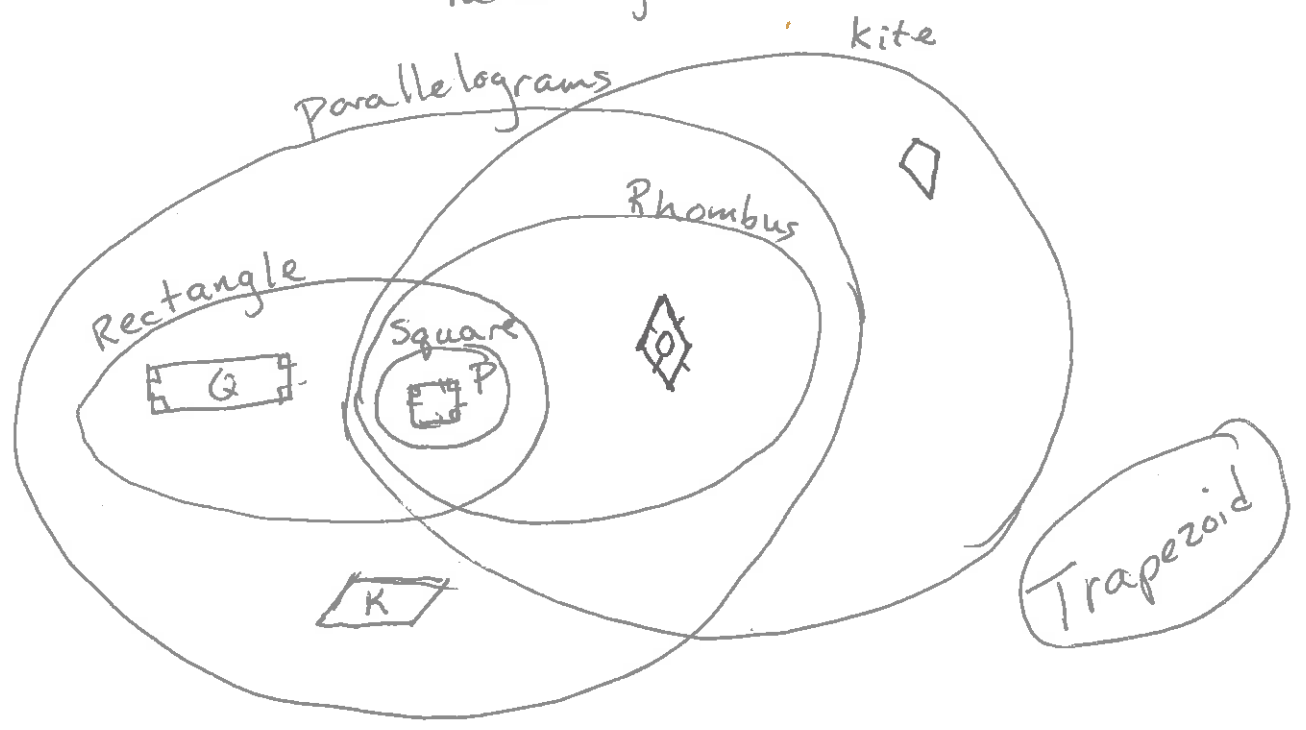

$$6 \times \square = 42$$

$$20 \div 4 = ?$$

$$4 \times \square = 20$$

Quadrilaterals:

$$\begin{array}{r|l}
 247 & \\
 \hline
 7 \overline{) 1729} & \\
 \underline{700} & 100 \\
 1029 & \\
 \underline{700} & 100 \\
 329 & \\
 \underline{280} & 40 \\
 49 & \\
 \underline{49} & 7 \\
 \hline
 & 247
 \end{array}$$
