Notes from videos:

4 candy bars shared by 6 children

Each gets $\frac{1}{2} + \frac{1}{6}$

each gets 4 sixths $\frac{4}{6}$

$2 \times 3 = 6$

I can split 2 candy bars in 6 pieces making $\frac{1}{3}$ size pieces

2×2

$\frac{1}{3} + \frac{1}{3} = \frac{2}{3}$

$2 \times 3 = 6 = 3 + 3$ make two groups $\frac{2}{3}$
$2 \times 2 = 4 = 2 + 2$

4 children sharing 6 candy bars

Big shares

Each gets $1 + \frac{1}{2}$

Share each

6 fourths
$\frac{1}{4} + \frac{1}{4} + \frac{1}{4} + \frac{1}{4} + \frac{1}{4} + \frac{1}{4}$
$\frac{6}{4}$

$6 = 2 \text{group} \times 3$
$4 = 2 \times 2$
Split into groups

each gets $\frac{3}{2}$ ★
