

Division of fractions problems:

1. Write a measurement division problem for $\frac{2}{3} \div \frac{3}{8}$. Draw a double number line diagram to solve the problem.

2. Write a partition division problem for $\frac{4}{5} \div \frac{3}{8}$. Draw a bar diagram (tape diagram) to solve the problem.

3. Use the bar diagram to explain why $\frac{4}{5} \div \frac{3}{8}$ tells you the answer.
