

Solve each by drawing a picture. Then try to find an equation that solves the problem the same way. (which of these are multiplication? Which are division? How do you know?)

1. A bag of candy weighs $\frac{3}{4}$ of a pound. Jan has $\frac{2}{5}$ of a bag of candy. How much does her candy weigh?

2. Jan has $\frac{2}{5}$ of a bag of candy. Her candy weighs $\frac{3}{10}$ of a pound. How much does a full bag of candy weigh?

3. Jan has $\frac{3}{10}$ of a pound of candy. A full bag of candy weighs $\frac{3}{4}$ of a pound. How many bags of candy does Jan have?

4. James has $\frac{2}{3}$ cup of milk. Mary has $\frac{3}{4}$ as much milk as James. How much milk does Mary have?

5. Mary has $\frac{1}{2}$ cup of milk. She has $\frac{3}{4}$ as much milk as James. How much milk does James have?
