

Division of fractions problems:

1. Write a measurement division problem for  $\frac{2}{3} \div \frac{3}{8}$ . Draw a double number line diagram to solve the problem.

I have  $\frac{2}{3}$  of a pound/cup of sugar candy  
 It takes  $\frac{3}{8}$  of a bag of batch of...

2. Write a partition division problem for  $\frac{4}{5} \div \frac{3}{8}$ . Draw a bar diagram (tape diagram) to solve the problem.

1 batch  
2 batches

I have  $\frac{4}{5}$  lb of sugar. It makes  $\frac{3}{8}$  batch of candy.  
 How much sugar in 1 batch of candy

3. Use the bar diagram to explain why  $\frac{4}{5} \div \frac{3}{8}$  tells you the answer.

$$\frac{4 \times 8}{5 \times 3}$$

$\frac{4}{5} \div \left(\frac{3}{8}\right) = \text{size of ?}$   
 stuff I have a set of 1 whole  
 (ant in 1 part)  
 fraction of

$$\frac{4}{5} \times \frac{1}{3} \times \frac{8}{1} = \frac{4 \times 8}{5 \times 3}$$

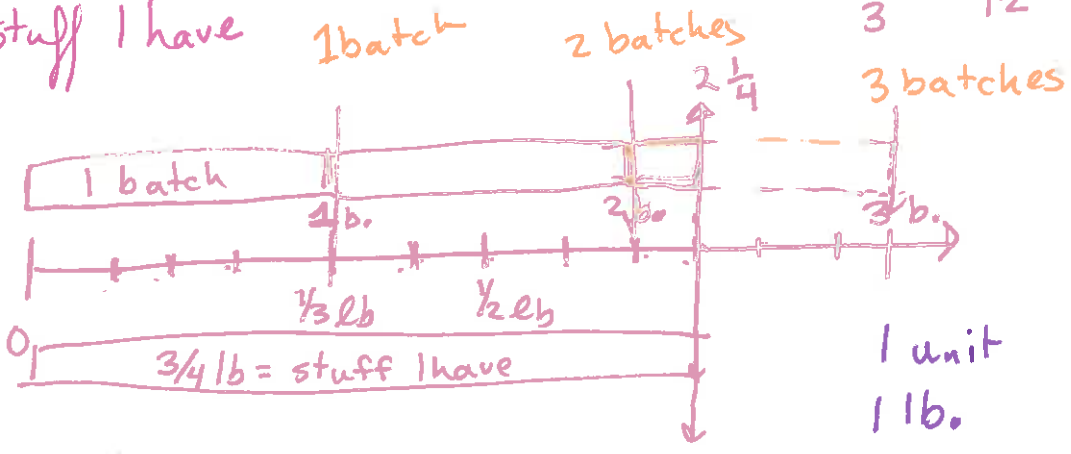

$\frac{1}{3}$  of my stuff  
 parts in 1 whole

$\frac{3}{4} \div \frac{1}{3} = 2\frac{1}{4}$  batches.

stuff in a batch / box / bag

$\frac{3}{4} = \frac{9}{12}$   
 $\frac{1}{3} = \frac{4}{12}$

stuff I have

$\frac{3}{4} = \frac{9}{12} \text{ lb.}$

$\frac{2}{3} \div \frac{1}{4} = 2\frac{2}{3}$

$\frac{2}{3} = \frac{8}{12} \text{ (1b)}$

$\frac{1}{4} = \frac{3}{12} \text{ (1b)}$

$\frac{2}{3}$  lb tomatoes is what part of  $\frac{3}{4}$  lb <sup>batch</sup> tomatoes?

$\frac{8}{9}$  of a batch

Some more word problems:

1 A full jar holds  $\frac{2}{3}$  lb of jelly. How much does  $\frac{3}{4}$  of a jar of jelly weigh?  $\frac{3}{4}$  of  $\frac{2}{3}$

2 Mike has 3 lbs of candy. He wants to put  $\frac{1}{4}$  lb of candy into each bag. How many bags can he fill? M

1 lb

4 fourths in 1 lb  
4 x 3 fourths in 3 lb

3 John has 3 lbs of candy. He wants to put  $\frac{3}{4}$  lb of candy into each bag. How many bags can he fill? M

$3 \times 4 \div 3$   
4 bags.

4 Sarah has a pitcher that is  $\frac{1}{4}$  full of water. There are 3 cups of water in it. How many cups of water can her full pitcher hold? P

5 Jenna has a pitcher that is  $\frac{3}{4}$  full of water. There are 3 cups of water in it. How many cups of water can her full pitcher hold? P

6 Kylie has a pitcher that is  $\frac{2}{3}$  full of water. There are 3 cups of water in it. How many cups of water can her full pitcher hold? P

7 Paula has a pitcher that is  $\frac{2}{3}$  full of water. There is  $\frac{3}{4}$  of a quart of water in it. How many quarts of water can her full pitcher hold? P

A bag of candy weighs  $\frac{2}{3}$  lb.

$$\frac{2}{3} \times \frac{1}{4}$$

How much does  $\frac{1}{4}$  bag weigh?

$$\frac{1}{4} \text{ bag} = \frac{2}{12} \text{ lb}$$

$$1 \text{ bag} = \frac{2}{3} \text{ lb}$$

$$\frac{1}{4} \text{ bag} = \frac{1}{6} \text{ lb.}$$

Mike has 2 lbs of candy

if he puts  $\frac{2}{3}$  lb of candy in each bag,

How many bags can he fill?

3 bags.

Partition [ I have  $3\frac{1}{2}$  lbs of sugar. It is  $\frac{2}{3}$  of my sugar box. How much sugar in 1 full box? ]

$$\frac{2}{3} \text{ box} = 3\frac{1}{2} \text{ lbs} = \frac{7}{2} \text{ lbs}$$

$$1 \text{ box} = ? \text{ lbs}$$

$$\square \times 3$$

$$\frac{7}{2} \times \frac{1}{2} \times \frac{3}{1} = \frac{7 \times 3}{2 \times 2}$$

6. Fill in the blanks and draw a number line picture to solve:

$\frac{2}{3}$  of  $\frac{4}{5}$  of a unit.  $\square \times \square$   $\frac{2}{3}$  of  $\downarrow$  12 parts in here

$\frac{8}{15}$  ← parts to my fraction  
 $\frac{15}{15}$  ← parts in 1 unit

7. Draw an area picture (with squares) to solve  $\frac{2}{3} \times \frac{4}{5}$ . Explain with words how the picture shows that the answer should

be  $\frac{2 \times 4}{3 \times 5}$

$$\frac{2}{5} \text{ bag} = \frac{3}{10} \text{ lb}$$

$$\frac{3}{10} \div \frac{2}{5}$$

$$\frac{1}{2} \times \frac{3}{10}$$

$$\frac{3}{10} \times \frac{1}{2} \times \frac{5}{1}$$

Mike has  $\frac{4}{5}$  box of crackers

His crackers weigh  $\frac{2}{3}$  lb.

How much does 1 box weigh?

$$\frac{4}{5} \text{ box} = \frac{2}{3} \text{ lb}$$

$$\frac{1}{4} \text{ of } \frac{2}{3} = \frac{1}{4} \times \frac{2}{3} = \frac{2}{12}$$

$$\frac{2}{12} \times 5 = \frac{10}{12}$$

Solve each by drawing a picture. Then try to find an equation that solves the problem the same way.

1. A bag of candy weighs  $\frac{3}{4}$  of a pound. Jan has  $\frac{2}{5}$  of a bag of candy. How much does her candy weigh?  
1 bag =      lbs. Jan has      of a bag. How much Jan's candy?  
 $\frac{2}{5}$  of  $\frac{3}{4}$  of a lb : multiplication

2. Jan has  $\frac{2}{5}$  of a bag of candy. Her candy weighs  $\frac{3}{10}$  of a pound. How much does a full bag of candy weigh?  
Jan has      bag. All of her candy weighs      lbs. How much in 1 full bag?  
Bar diagram (tape diagram)  
Partition  
div

3. Jan has  $\frac{3}{10}$  of a pound of candy. A full bag of candy weighs  $\frac{3}{4}$  of a pound. How many bags of candy does Jan have?  
Jan has      lbs of candy. 1 full bag weighs      lbs. How many bags of candy?  
measurement  
div

4. James has  $\frac{2}{3}$  cup of milk. Mary has  $\frac{3}{4}$  as much milk as James. How much milk does Mary have?

5. Mary has  $\frac{1}{2}$  cup of milk. She has  $\frac{3}{4}$  as much milk as James. How much milk does James have?

I had  $\frac{2}{3}$  of a bag of sugar.

I used  $\frac{1}{2}$  of a bag of sugar to make cookies. How much sugar is left?

$$\frac{2}{3} - \frac{1}{2}$$

😊  
subtraction

I had  $\frac{2}{3}$  of a bag of sugar,

I used  $\frac{1}{2}$  of it <sup>↑</sup> the sugar I have to make cookies,

How much do I have left?

$$\frac{2}{3} - \left(\frac{1}{2} \times \frac{2}{3}\right)$$

😊  
not just subtraction

~~I had  $\frac{2}{3}$  of a bag of sugar~~

~~I used  $\frac{1}{2}$  of it to make cookies.~~

~~How much sugar is left?~~

same  
example  
repeated

Lucy walked  $\frac{2}{3}$  of a mile,  
Mike walked  $\frac{1}{2}$  of a mile.

How many more miles did Mike walk  
than Lucy?

||  
v  
Subtract

A chocolate bar weighs  $\frac{4}{5}$  lb. ←

Anna ate  $\frac{2}{3}$  of a choc. bar. *multiplication*  
How much did she eat?

*multiplication*

[How many lbs of chocolate did she eat?]  
[What fraction of a bar did she eat?]

A recipe <sup>batch</sup> calls for  $\frac{2}{3}$  of a cup of sugar.  
How much <sup>batch</sup> sugar do I need for  $\frac{4}{5}$  of  
a recipe?

A bag of candy weighs  $\frac{3}{8}$  lb.

Multiplication

How much does  $\frac{1}{4}$  bag weigh?

$\frac{3}{8}$  lb

$\frac{1}{4}$  of  $\frac{3}{8}$  lb.

A bag of candy weighs  $\frac{4}{5}$  lb. How much does  $\frac{2}{3}$  bag weigh?

$\frac{4}{5}$  lb

$\frac{2}{3}$  of the  $\frac{4}{5}$  lb.

$$\frac{2}{3} \times \frac{4}{5} = \frac{2 \times 4}{3 \times 5}$$

← filled in ~~rows x cols~~, across x down  
 ← whole ~~rows x cols~~  
 across x down

I have  $\frac{2}{3}$  of a box of sugar.

I use  $\frac{1}{2}$  of ~~the~~ <sup>a</sup> box to make cookies.  
How much sugar do I have left?

I have  $\frac{2}{3}$  of a box of sugar.

I use  $\frac{1}{2}$  of the ~~box~~ ~~of~~ sugar to make cookies. How much sugar do I use?

~~we~~  $\frac{1}{2} \times \frac{2}{3}$  half of the stuff in the box

$\frac{2}{3}$  of whole box

A recipe calls for  $\frac{2}{3}$  cup of sugar.

I want to make the recipe  $\frac{4}{5}$  ~~larger~~ as large

How much sugar should I use?

X

Shelly spent  $\frac{3}{8}$  of the day in school.

She spent  $\frac{4}{5}$  of the school day helping at

the career fair. What fraction of

the day was spent at the career fair.

X
